Report

Let N be a finite set of participants. Let t be the threshold (authorized subset in N). A secret sharing scheme on N is a collection $(s_i)_{i \in N}$ of discrete random variables and satisfies the following condition:

1. Correctness:

$\forall m \in N \forall S = \{i_1, \dots, i_t\} \subseteq \{1, \dots, n\}$ of size t ,

$$Pr_{\text{share}(m) \rightarrow (s_1, \dots, s_n)}[\text{Reconstruct}(s_{i_1} \dots s_{i_t}) = m] = 1$$

Shamir's secret sharing scheme fits in the above definition because it has two algorithms share and reconstruct. The set here is \mathbb{Z}_p where p is prime. Share is a randomized algorithm:

1. Choose n distinct elements non-zero elements in \mathbb{Z}_p .
2. Choose randomly $a_1, \dots, a_{t-1} \in \mathbb{Z}_p$
3. Form $f(x) = m + \sum_{i=1}^{t-1} a_i x^i \text{ mod } p$

User P_i receives the share, $(x_i, y_i = f(x_i))$; x_i is public.

Any authorized subset t can find the secret:

$$H(m|s_1, \dots, s_t) = 0$$

Any subset of $t-1$ learns nothing about the secret

$$H(m|s_1, \dots, s_{t-1}) = H(m)$$

Correctness is satisfied that any t shares always reconstruct the secret.

Example:

Let $m \in \mathbb{Z}_7$. Let $m = 6$, $t = 3$, $n = 5$, $a_1 = 2$, $a_2 = 4$. The polynomial is :

$$f(x) = 6 + 2x + 4x^2$$

This polynomial will be used to generate shares. For instance:

$x=1$ gives 5.

$P_1 : (1, f(1) = 5), P_2 : (2, f(2) = 5), P_3 : (3, f(3) = 6), P_4 : (4, f(4) = 1), P_5 : (5, f(5) = 4)$

Reconstruction:

$$f(x) = m + a_1x + a_2x^2$$

Using the first 3:

$$5 = m + a_1 + a_2$$

$$5 = m + 2a_1 + 4a_2$$

$$6 = m + 3a_1 + 2a_2$$

Solving the system of equations will give the secret.

6.
$$\begin{aligned} 5 &= m + a_1 + a_2 \\ 5 &= m + 2a_1 + 4a_2 \\ 6 &= m + 3a_1 + 2a_2 \end{aligned} \Rightarrow \begin{aligned} m + a_1 + a_2 &= m + 2a_1 + 4a_2 \\ a_1 &= -3a_2 \\ a_1 &= 4a_2 \end{aligned}$$

$$\begin{aligned} 6 &= m + 3(4a_2) + 2a_2 \\ 6 &= m + 14a_2 \\ 6 &= m \end{aligned}$$

$$m = 6$$

$12 \bmod 3 = 0$

Thus correctness is satisfied. Any $t-1$ (2 with 3 unknowns) cannot solve the system thus security is satisfied.
